

# Infection control

## Clean your hands

We are working hard to reduce avoidable infections and to provide a clean and safe environment for patients, their relatives and our staff. We audit hand hygiene compliance monthly, with weekly spot checks.

## MRSA Bacteraemia

There were no cases of hospital avoidable MRSA bacteraemias attributed to CUH in 2017/18.

## Clostridium difficile

There were 67 cases of hospital-onset *C. difficile* in 2017/18 which represents a slight rise compared to recent years.

### Information for patients and visitors

There is detailed information about infection control in the Addenbrooke's and Rosie Hospital sections of this website.
