

# Transplant pharmacy team

## **Lead pharmacist for transplantation, whose roles include:**

- monitor drug therapies, for example ensuring correct doses of drugs, highlighting potential drug interactions
- authorise and validate medication discharge prescriptions
- promote and demonstrate rational, cost effective drug therapy
- provide drug information about potential side effects and drug interactions

## **Specialist transplant pharmacy technician, whose roles include:**

- promote medication education of patients, carers and relatives
- create medication information cards
- facilitate discharge planning by writing medication discharge prescriptions
- reconcile home medications with those prescribed at admission
- order and supply prescribed medications

## **Specialist transplant pharmacist:**

This pharmacist supports the lead pharmacist in the roles outlined above.

## **Rotational pharmacist:**

This pharmacist will work on the transplant unit for a year and will be supporting the lead pharmacist in the roles outlined above.
