

Tissue typing for transplant

The Addenbrooke's Hospital Histocompatibility and Immunogenetics (Tissue Typing) laboratory provides a specialist histocompatibility and immunogenetics service for the East of England region and is part of the NIHR Cambridge Biomedical Research Centre. The laboratory is responsible for the selection of HLA compatible donor and recipient pairs for renal and stem cell transplantation and for HLA typing, HLA specific antibody screening and crossmatching in support of the small intestinal, multi-visceral, hepatic and cardio-thoracic transplant programmes.
