

## Your treatment

Most cancer patients receive their treatment as outpatients. You will only be admitted to hospital if the nature of your cancer or your treatment makes it impossible for you to remain at home. Within cancer services we offer the following treatments:

- Chemotherapy
- Radiotherapy
- Bone marrow transplant

We often use a combination of different treatments to achieve the best possible outcome.

Cancer treatment also often involves surgery. In this case we cooperate closely with our surgical colleagues to ensure that all elements of your treatment are properly planned, coordinated and delivered.
