

Small bowel

Small bowel or multi visceral transplantation is a relatively new and exciting development within the world of transplantation and at Addenbrooke's we feel extremely privileged to be the only transplant centre in the UK to perform full multi visceral transplantation which includes the liver and other organs such as stomach, pancreas and kidney. We have also recently started transplanting the large bowel routinely which we have found improves fluid balance within our group of patients.

...our success is down to the very dedicated group of specialists: surgeons, physicians, nurses and others; who work in a fully integrated way to achieve this...
