Urology Department

Removal of part or all of the epididymis

What is the evidence base for this information?
This leaflet includes advice from consensus panels, the British Association of Urological Surgeons, the Department of Health and evidence based sources; it is, therefore, a reflection of best practice in the UK. It is intended to supplement any advice you may already have been given by your urologist or nurse specialist as well as the surgical team at Addenbrookes. Alternative treatments are outlined below and can be discussed in more detail with your urologist or specialist nurse.

What does the procedure involve?
Surgical removal of the sperm carrying mechanism behind the testicle.

What are the alternatives to this procedure?
Conservative treatment, removal of the testicle.

What should I expect before the procedure?
You will usually be admitted on the day of your surgery. A pre-admission appointment will normally be sent to you to assess your general fitness, to screen for the carriage of MRSA and to perform some baseline investigations.

After admission, you will be seen by members of the medical team which may include the consultant, junior urology doctors and your named nurse.

You will be asked not to eat or drink for six hours before surgery and, immediately before the operation, you may be given a pre-medication by the anaesthetist which will make you dry-mouthed and pleasantly sleepy.
Please be sure to inform your urologist in advance of your surgery if you have any of the following:

- an artificial heart valve
- a coronary artery stent
- a heart pacemaker or defibrillator
- an artificial joint
- an artificial blood vessel graft
- a neurosurgical shunt
- any other implanted foreign body
- a prescription for Warfarin, Aspirin, Rivaroxaban, Dabigatran, Apixaban, Edoxaban or Enoxaparin, Ticagrelor or blood thinning medication
- a previous or current MRSA infection
- high risk of variant CJD (if you have received a corneal transplant, a neurosurgical dural transplant or previous injections of human derived growth hormone)

What happens during the procedure?

Normally, a full general anaesthetic will be used and you will be asleep throughout the procedure. In some patients, the anaesthetist may also use an epidural anaesthetic which improves or minimises pain post operatively. An incision is made in the scrotum so that the epididymis can be removed, whilst carefully preserving the testicle itself and its blood supply.

What happens immediately after the procedure?

You may experience discomfort for a few days after the procedure but painkillers will be given to you to take home. Absorbable stitches are normally used which do not require removal.

The average hospital stay is less than one day.

Are there any side effects?

Most procedures have a potential for side effects. You should be reassured that, although all these complications are well recognised, the majority of patients do not suffer any problems after a urological procedure.

Please use the check boxes to tick off individual items when you are happy that they have been discussed to your satisfaction:

Common (greater than one in 10)
- [ ] Swelling of the scrotum lasting several days
- [ ] Seepage of yellowish fluid from the wound several days after surgery

Occasional (between one in 10 and one in 50)
- [ ] Blood collection (haematoma) around the testes which resolves slowly or requires surgical removal
- [ ] Possible infection of the incision or the testis requiring further treatment with antibiotics or surgical drainage
- [ ] Failure to relieve the symptoms of epididymal pain
What should I expect when I get home?
When you leave hospital, you will be given a discharge summary of your admission. This holds important information about your inpatient stay and your operation. If, in the first few weeks after your discharge, you need to call your GP for any reason or to attend another hospital, please take this summary with you to allow the doctors to see details of your treatment. This is particularly important if you need to consult another doctor within a few days of your discharge.

The wound should be kept clean and dry for 24 hours. Thereafter, if a dressing is in place, this can be removed following a short bath or shower. Until the area heals, do not have lengthy baths or showers since this will encourage the stitches to dissolve too quickly and may cause infection.

It is advisable to wear supportive underpants or a scrotal support until the swelling and discomfort have settled.

What else should I look out for?
If you develop a temperature, increased redness, throbbing or drainage at the site of the operation, please contact your GP immediately.

Are there any other important points?
Some lumpiness above or behind the testicle is common following the procedure and is often permanent. Outpatient follow up is not always necessary and your surgeon will discuss arrangements for this as appropriate.

Driving after surgery
It is your responsibility to ensure that you are fit to drive following your surgery.

You do not normally need to notify the DVLA unless you have a medical condition that will last for longer than three months after your surgery and may affect your ability to drive. You should, however, check with your insurance company before returning to driving. Your doctors will be happy to provide you with advice on request.

Privacy & Dignity
Same sex bays and bathrooms are offered in all wards except critical care and theatre recovery areas where the use of high tech equipment and/or specialist one to one care is required.

Hair removal before an operation
For most operations, you do not need to have the hair around the site of the operation removed. However, sometimes the healthcare team need to see or reach your skin and if this is necessary they will use an electric hair clipper with a single-use disposable head, on the day of the surgery.
Please do not shave the hair yourself or use a razor to remove hair, as this can increase the risk of infection. Your healthcare team will be happy to discuss this with you.

**Is there any research being carried out in this field at Addenbrooke’s Hospital?**

There is no specific research in this area at the moment but all operative procedures performed in the department are subject to rigorous audit at a monthly audit and clinical governance meeting.

**Who can I contact for more help or information?**

**Oncology nurses**

_Uro-oncology nurse specialist_
01223 586748

_Bladder cancer nurse practitioner (haematuria, chemotherapy and BCG)_
01223 274608

_Prostate cancer nurse practitioner_
01223 274608 or 216897 or bleep 154-548

_Surgical care practitioner_
01223 348590 or 256157 or bleep 154-351

**Non-oncology nurses**

_Urology nurse practitioner (incontinence, urodynamics, catheter patients)_
01223 274608 or 586748 or bleep 157-237

_Urology nurse practitioner (stoma care)_
01223 349800

_Urology nurse practitioner (stone disease)_
01223 349800 or bleep 152-879

What should I do with this leaflet?
Thank you for taking the trouble to read this patient information leaflet. If you wish to sign it and retain a copy for your own records, please do so below.

If you would like a copy of this leaflet to be filed in your hospital records for future reference, please let your urologist or specialist nurse know. If you do, however, decide to proceed with the scheduled procedure, you will be asked to sign a separate consent form which will be filed in your hospital notes and you will, in addition, be provided with a copy of the form if you wish.

I have read this patient information leaflet and I accept the information it provides.

Signature...............................................................Date..............................................
We are now a smoke-free site: smoking will not be allowed anywhere on the hospital site. For advice and support in quitting, contact your GP or the free NHS stop smoking helpline on 0800 169 0 169.

Other formats:
If you would like this information in another language, large print or audio, please ask the department where you are being treated, to contact the patient information team: patient.info@addenbrookes.nhs.uk.

Please note: We do not currently hold many leaflets in other languages; written translation requests are funded and agreed by the department who has authored the leaflet.
