Self-catheterisation in male patients: Frequently asked questions

What is self-catheterisation?
Self-catheterisation means that you insert a small, flexible plastic tube into the bladder. The urine flows out through this tube which is then removed. By emptying the bladder regularly in this way, you will prevent a build up of stagnant urine and should feel more comfortable. You will also be keeping the kidneys and bladder healthy by preventing urinary infections. Some people find that they have less difficulty preventing themselves becoming wet using this technique.

What equipment do I need?
- A catheter – supplied at first by the outpatient clinic and then available to order on prescription from your GP
- Baby wipes
- A bottle, dish or plastic box to catch the urine

How do I do it?
- Sit on a towel with a plastic sheet just underneath; some men prefer to perform self-catheterisation sitting on or even standing in front of the toilet
- Remove your pants and tuck other clothing out of the way
- Wash your hands thoroughly
- Roll back the foreskin and wash the end of the penis using baby wipes
- Hold the catheter two inches from its tip.
- Hold the penis straight out from the body and, without touching the catheter on anything else, slowly and gently insert it until urine flows
If the catheter seems to stick just before it enters the bladder, wait a few seconds to allow the sphincter (valve) muscle to relax and then push it gently in a little further

Withdraw the catheter slowly

**Personal information**

Use the catheter .......... times a day

Use a new plastic bag every day

Discard the catheter and use a new catheter for each catheterisation (catheters are single-use and are not re-usable)

**Catheter information**

Catheter recommended........................................ (male)

Size ..........FG

**Other information**

This patient information leaflet provides input from specialists, the British Association of Urological Surgeons, the Department of Health and evidence based sources as a supplement to any advice you may already have been given by your GP. Alternative treatments can be discussed in more detail with your urologist or specialist nurse.

**Who can I contact for more help or information?**

**Oncology nurses**

**Uro-oncology nurse specialist**

01223 586748

**Bladder cancer nurse practitioner (haematuria, chemotherapy and BCG)**

01223 274608

**Prostate cancer nurse practitioner**

01223 274608 or 216897 or bleep 154-548

**Surgical care practitioner**

01223 348590 or 256157 or bleep 154-351

**Non-oncology nurses**

**Urology nurse practitioner (incontinence, urodynamics, catheter patients)**

01223 274608 or 586748 or bleep 157-237

**Urology nurse practitioner (stoma care)**

01223 349800

**Urology nurse practitioner (stone disease)**

01223 349800 or bleep 152-879
