Urology Department

Surgery for a congenital hydrocele/hernia

What is the evidence base for this information?
This leaflet includes advice from consensus panels, the British Association of Urological Surgeons, the Department of Health and evidence based sources; it is, therefore, a reflection of best practice in the UK. It is intended to supplement any advice you may already have been given by your urologist or nurse specialist as well as the surgical team at Addenbrookes. Alternative treatments are outlined below and can be discussed in more detail with your urologist of specialist nurse.

What does the procedure involve?
This involves drainage of a fluid sac surrounding the testicle via an incision in the groin. Any communication between the fluid sac and the abdominal cavity will also be tied off.

What are the alternatives to this procedure?
Observation (the fluid may resolve with time), removal of the fluid with a needle (although this usually results in recurrence)

What should I expect before the procedure?
You will usually be admitted on the same day as your surgery. You will normally undergo pre assessment on the day of your clinic or an appointment for pre assessment will be made from clinic, to assess your general fitness, to screen for the carriage of MRSA and to perform some baseline investigations. After admission, you will be seen by members of the medical team which may include the consultant, junior urology doctors and your named nurse.

You will be asked not to eat or drink for six hours before surgery and, immediately before the operation, you may be given a pre-medication by the anaesthetist which will make you dry-mouthed and pleasantly sleepy.
Please be sure to inform your urologist in advance of your surgery if you have any of the following:

- an artificial heart valve
- a coronary artery stent
- a heart pacemaker or defibrillator
- an artificial joint
- an artificial blood vessel graft
- a neurosurgical shunt
- any other implanted foreign body
- a prescription for Warfarin, Aspirin, Rivaroxaban, Dabigatran, Apixaban, Edoxaban or Clopidogrel, Ticagrelor or blood thinning medication
- a previous or current MRSA infection
- high risk of variant CJD (if you have received a corneal transplant, a neurosurgical dural transplant or previous injections of human derived growth hormone)

**What happens during the procedure?**

Normally, a full general anaesthetic will be used and you will be asleep throughout the procedure. A small incision is made in the groin to locate the fluid filled hernia sac and to tie it off.

**What happens immediately after the procedure?**

You may experience discomfort for a few days after the procedure but painkillers will be given to you to take home. Absorbable stitches are normally used which do not require removal.

Most patients go home the same day.

**Are there any side effects?**

Most procedures have a potential for side effects. You should be reassured that, although all these complications are well recognised, the majority of patients do not suffer any problems after a urological procedure.

Please use the check boxes to tick off individual items when you are happy that they have been discussed to your satisfaction:

**Common (greater than one in 10)**

- □ Swelling of the scrotum lasting several days
- □ Seepage of yellowish fluid from the wound several days after surgery

**Occasional (between one in 10 and one in 50)**

- □ Occasionally, a larger hernia may be found which needs to be formally repaired with stitches or a mesh graft
- □ Collection of blood around the testis requiring surgical treatment
Rare (less than one in 50)
- Infection of the incision or the testes requiring further treatment
- Recurrence of the fluid collection requiring further treatment

What should I expect when I get home?
When you leave hospital, you will be given a discharge summary of your admission. This holds important information about your inpatient stay and your operation. If, in the first few weeks after your discharge, you need to call your GP for any reason or to attend another hospital, please take this summary with you to allow the doctors to see details of your treatment. This is particularly important if you need to consult another doctor within a few days of your discharge.

In young adults, a period of 10 to 14 days off work is advisable.

What else should I look out for?
If you or your child develops a temperature, increased redness, throbbing or drainage at the site of the operation, please contact your GP.

Are there any other important points?
A follow up outpatient appointment will normally be arranged six to eight weeks after the operation to assess the outcome.

Driving after surgery
It is your responsibility to ensure that you are fit to drive following your surgery.

You do not normally need to notify the DVLA unless you have a medical condition that will last for longer than three months after your surgery and may affect your ability to drive. You should, however, check with your insurance company before returning to driving. Your doctors will be happy to provide you with advice on request.

Privacy & Dignity
Same sex bays and bathrooms are offered in all wards except critical care and theatre recovery areas where the use of high tech equipment and/or specialist one to one care is required.

Hair removal before an operation
For most operations, you do not need to have the hair around the site of the operation removed. However, sometimes the healthcare team need to see or reach your skin and if this is necessary they will use an electric hair clipper with a single-use disposable head, on the day of the surgery. Please do not shave the hair yourself or use a razor to remove hair, as this can increase the risk of infection. Your healthcare team will be happy to discuss this with you.

Is there any research being carried out in this field at Addenbrooke’s Hospital?

There is no specific research in this area at the moment but all operative procedures performed in the department are subject to rigorous audit at a monthly audit and clinical governance meeting.

Who can I contact for more help or information?

**Oncology nurses**

**Uro-oncology nurse specialist**
01223 586748

**Bladder cancer nurse practitioner (haematuria, chemotherapy and BCG)**
01223 274608

**Prostate cancer nurse practitioner**
01223 274608 or 216897 or bleep 154-548

**Surgical care practitioner**
01223 348590 or 256157 or bleep 154-351

**Non-oncology nurses**

**Urology nurse practitioner (incontinence, urodynamics, catheter patients)**
01223 274608 or 586748 or bleep 157-237

**Urology nurse practitioner (stoma care)**
01223 349800

**Urology nurse practitioner (stone disease)**
01223 349800 or bleep 152-879

**Patient Advice and Liaison Centre (PALS)**
Telephone:  
+44 (0)1223 216756 or 257257

Hills Road, Cambridge, CB2 2QQ
What should I do with this leaflet?
Thank you for taking the trouble to read this patient information leaflet. If you wish to sign it and retain a copy for your own records, please do so below.

If you would like a copy of this leaflet to be filed in your hospital records for future reference, please let your urologist or specialist nurse know. If you do, however, decide to proceed with the scheduled procedure, you will be asked to sign a separate consent form which will be filed in your hospital notes and you will, in addition, be provided with a copy of the form if you wish.

I have read this patient information leaflet and I accept the information it provides.
